Proxy setup with recent versions of Firefox

After opening Firefox, click on the icon with three horizontal lines at the top right, and choose Preferences
Scroll down the page to access the Network Settings
You then enter the proxy setup page, similar to other versions of Firefox.

Set according to the screen:

Choose Manual Proxy Setup,

Write in Proxy HTTP → 193.206.103.10 in Port → 3128

Select “Also use this proxy for HTTPS”

Confirm with OK button.

Trying to view a web page, a panel requesting credentials should appear: enter the same credentials used to access the university wifi network, which can be managed autonomously through the website www.wifi.unicampania.it.
